Restorative Therapies iFES™ Therapy

Combining functional electrical stimulation (FES) integrated with task specific or motor assistance/ resistance activities to create integrated functional electrical stimulation (iFES) therapies.

iFES augments volitional contractions in weak or paralyzed muscles in order to begin progressive resistive or task-specific therapy which has been shown to provide comprehensive therapeutic outcomes including reduction of secondary health conditions, improved motor function, gait improvement, and more.*

Cleared by FDA to:

- Reduce muscle atrophy
- Reduce muscle spasms
- Improve local circulation
- Maintain or increase range of motion
- Facilitate muscle re-education

Neurological Diagnoses

- Spinal Cord Injury
- Stroke
- Brain Injury
- Cerebral Palsy
